

## Sheet Metal Fabrication for Fully Integrated Wireless Mobile Workstation

### **Application:**

This mobile workstation enables medical professionals to access patient information wirelessly throughout a facility.

Our relationship began with the development of several sheet metal components. As the design evolved and our DFM support increased, it became clear that we could provide greater value by supplying the complete product. We purchase components from outside vendors and assemble the entire medical cart.

### **Base Cart**

- 40% of the cart is sheet metal
- The remainder of the components are purchased externally including three moldings, three extrusions, castings, gas shocks and casters.

**Lupton Associates** offers the proven ability to provide integrated solutions that meet the demands of design, time to market and product cost objectives.

The solutions we provide include:

- Prototyping
- Stamping
- Metal Fabrication
- Machined Components
- Polymeric Molding
- Electronic Manufacturing Services
- Casting
